

ANISH THOMAS

SAP Platform Engineer | SAP HANA & Basis Specialist

PROFESSIONAL SUMMARY

SAP Certified HANA DBA and SAP Platform Engineer with 13+ years of experience engineering and operating mission-critical SAP landscapes across large enterprise hybrid and cloud environments. Deep expertise in SAP HANA performance engineering, high availability architecture, system replication, disaster recovery strategy, and large-scale Azure cloud migrations. Led design and execution of 4-node HANA Scale-Out production systems, complex OS/DB migrations, and S/4HANA RISE operations with hybrid SAP BTP connectivity. Recognized for stabilizing production environments, reducing infrastructure risk, optimizing cloud costs, and delivering resilient SAP platforms aligned with business continuity objectives.

WORK HISTROY

Lead SAP Basis, 01/2025 to Current

TRITUSA (UGL) - Sydney

- Supporting S/4HANA RISE migration including transport retrofit coordination and system refresh execution
- Configured SAP Cloud Connector to enable secure hybrid connectivity between S/4HANA and BTP subaccounts
- Supported SAP Fiori and SAP Gateway (hub deployment) in hybrid S/4HANA RISE landscape including OData activation, RFC connectivity, and performance troubleshooting
- Collaborating with SAP ECS cloud operations post S/4HANA RISE go-live to manage performance tuning, BAU incident resolution, and overall system stability
- Managing BAU operations including system monitoring, kernel/patch management, transport governance, and performance optimization
- Contributing to platform stabilization during migration and go-live phases
- Supported CRM to Salesforce migration, coordinating transport decommissioning, system cutover, and post-migration integration monitoring
- Configured SAP ILM (Information Lifecycle Management) for SSOFTCONT1 to establish compliant data retention and archiving strategy, aligning governance controls and optimizing database growth.

Delivery Lead – UDF SAP Basis, 05/2022 to 01/2025

TCS (Woolworths) - Sydney

- Led technical delivery for Greenfield SAP Unified Demand Forecast (UDF) platform supporting 2,000+ retail stores and multi-billion record datasets.

SKILLS

SAP HANA & Database Engineering

- SAP HANA 2.0 (SPS02, SPS05, SPS07) – Installation, upgrades, 4-node Scale-Out production landscape
- Performance Engineering – Workload Classes, Statement Memory Limits (SML), thread management, Plan Cache & EXPLAIN PLAN analysis
- Data & Storage Optimization – HASH/Range partitioning, Delta Merge tuning, compression strategy
- High Availability & Disaster Recovery – HANA System Replication (sync/async), backup architecture, recovery validation
- Enterprise Oracle HA/DR Architecture across SAP ECC, Gateway, SLT & GRC landscapes – Oracle 12c/19c lifecycle management, ASM storage architecture, Data Guard (Max Availability/FSFO), RMAN & BRTools recovery validation

SAP Enterprise Platform Operations

- Led three major go-live cutovers (technical, functional, and business) ensuring zero rollback and uninterrupted retail operations.
- Designed and implemented 4-node SAP HANA Scale-Out production architecture supporting multi-billion record forecasting workloads.
- Designed and upgraded SAP SLT replication (NW 750 → 752 / DMIS) to ensure real-time data stability across ECC, CAR, and UDF landscapes.
- Resolved critical performance bottlenecks through Plan Cache analysis, Workload Class design, Statement Memory Limits, and thread optimization
- Led three major HANA SPS upgrades (SPS02 → SPS05 → SPS07), stabilizing production performance and reducing post-upgrade incidents
- Installed and configured SAP HANA XSA for ML forecasting applications, deploying host-based add-ons
- Integrated SAP Analytics Cloud (Direct Live) and configured SAML-based SSO via Fiori Launchpad
- Enabled Informatica-based extraction of 2–6 billion records from HANA to Azure Blob storage
- Implemented automated data lifecycle management (XSC DLM) to maintain system integrity, control data growth, and prevent performance degradation

Delivery Lead – Cloud Migration (Woolworths), 11/2020 to 04/2022

TCS India

- Led SAP technical delivery for Azure migration of 20+ SAP applications (75TB data, 435 servers) from on-prem Linux to Microsoft Azure.
- Designed and executed multiple mock cutovers to validate downtime assumptions and mitigate production migration risk.
- Implemented Oracle 19c with ASM on Azure VMs, configured and validated Data Guard HA/DR setup
- Implemented Oracle backup and recovery architecture post-migration using BRTools, RMAN, and DDVE integration, ensuring compliant retention policies and validated disaster recovery readiness.
- Built high-availability clusters for ABAP/JAVA stacks (SCS, Application, Web Dispatcher) on Azure using Pacemaker and STONITH fencing
- Migrated mission-critical systems including ECC, Gateway, SLT, and GRC with minimal downtime
- Led post-migration Azure cost optimization initiatives including orphaned disk cleanup, storage tier rationalization, and resource right-sizing to reduce operational expenditure.

Senior SAP Basis Consultant-Ally Financial, 10/2012 to 11/2020

Cognizant India

- Managed 24/7 SAP operations across ECC, BW, CRM, GRC, and Solution Manager landscapes
- Managed BAU operations including job scheduling, system monitoring, spool/error handling, user administration, and incident management
- Executed Oracle database upgrades (10g → 19c) with zero data loss
- Performed archiving (IDOCs & DBTABLOG) and database optimization, reclaiming 800GB space
- Performed support pack upgrades, kernel patching, and language installations

- S/4HANA (RISE) – Transport governance and hybrid landscape operations
- Executed system refresh strategy (PRD → Non-PRD), including structured post-copy activities and landscape validation
- Executed SAP kernel upgrades and Support Package Stack (SPS) maintenance across ABAP and HANA landscapes, ensuring compatibility and production stability.
- Production incident stabilization (P1/P2), root cause analysis, and performance recovery
- SAP Cloud Connector – Secure hybrid connectivity with SAP BTP
- SAP Analytics Cloud (SAC) & HANA XSA deployments
- SAP BTP account model – Global Account, Subaccounts, Entitlements, IAS/IPS integration
- Cross-landscape cutover coordination and production readiness validation

Cloud & Infrastructure (Azure & Linux Platforms)

- Microsoft Azure – SAP workload deployment across VMs, Availability Zones, Load Balancers, and HA configurations
 - Pacemaker & STONITH clustering for SAP application and database high availability
 - Azure Site Recovery and enterprise disaster recovery validation exercises
 - Post-migration cost optimization – storage tier rationalization and resource right-sizing
 - SUSE Linux Enterprise Server (SLES) administration – OS patching, lifecycle management, subscription and license compliance governance
-

- Led disaster recovery drills achieving 95% readiness score
-

EDUCATION

Bachelor of Engineering, Computer Science, 01/2012

CERTIFICATIONS

SAP Certified – SAP BTP Administrator (C_ADBTP_2511)

SAP Certified Associate – SAP S/4HANA System Administration (C_TADM)

SAP Certified – Database Administrator – SAP HANA (C_HANATEC)

SAP Certified – OS/DB Migration for SAP NetWeaver

SAP Certified – SAP HANA 2.0 SPS05

SAP Certified – SAP Solution Manager 7.2

Microsoft Certified – Azure for SAP Workloads

Microsoft Certified – Azure Administrator

AWS Certified – Solutions Architect – Associate

Google Cloud Certified – Associate Cloud Engineer
